

## KEY

*The following is the key for reading the statistics contained in the following pages:*

<b>Heading</b>	<b>Description</b>
<b>Player</b>	Player Name
<b>Team</b>	Players Team at end of respective season
<b>GP</b>	Games Played
<b>PIM</b>	Penalty Minutes
<b>PM Factor</b>	Derived from NHL stat of Plus-Minus (a player receives plus 1 for a even strength goal scored while on ice and a minus 1 for an even strength goal scored against while on ice) The plus minus factor is a measure of a players expected plus minus determined by his teams even strength goals and goals against and the players even strength time on ice per game against the actual plus minus of the player in question. For the following pages; plus minus is measured on a scale where zero is equal to 50 and each plus is worth +1 and each minus -1. A player with an adjusted plus minus exactly as would be expected in regard to ice time and team performance will have a plus minus factor of 1.000.
<b>Points P/G Factor</b>	A measurement of the average points (goals plus assists) per game registered by all forwards or defenseman in the respective season. 1.000 represents the average points per game for forwards.
<b>TOI Factor</b>	TOI is Time on Ice. Measured against the average time spent on ice per game for each forward during each respective season. 1.000 is average.
<b>Min/Shot Factor</b>	Measurement against the average of how many minutes of ice time it takes a player to generate a shot on goal. League average is 1.000
<b>S% Factor</b>	Measurement of goals vs. shots on net vs. the forwards or defenseman league average for the season. Average is 1.000
<b>PG Factor</b>	Per game factor is a measurement of the stated players overall factor per game played in. PG Factor is derived by divided overall factor per game played in.
<b>Multp.</b>	Multiplier factor is derived by multiplying the players overall factor by the players per game factor for the season.
<b>Ovr. w/ TM</b>	A measurement of a players overall factor multiplied by the players respective team factor for the season.
<b>Overall Factor</b>	Team factor is a teams total points for the season divided by 82. Weighted average of Plus Minus Factor, Points PG Factor, TOI Factor, Min/Shot Factor and Shot Percentage Factor. For forwards, PM Factor is given double weight and all other categories are equal. For defenseman, PM factor is given triple weight and all other categories are equal.

### Boston Bruins, 74pts, 13th, Out of Playoffs

The 2005-06 season was a long and embarrassing one for the once proud Bruins franchise. A season that started with brimming expectations soon fell flat. After early struggles captain and face of the team Joe Thornton was dealt. Thornton would go on to lead the league in points and win the Hart Trophy. Free agents Shawn Mceachern (.247ovr) and Alexei Zhamnov (.234) were complete washouts. Calder winner Andrew Raycroft turned into the worst goalie in the league. Hall Gill (.742) continued to refuse to body check and his overall game disintegrated. Yet there were some bright spots. Patrice Bergeron (1.266) stepped out right after the Thornton trade into the role of team leader and paired with surprise rookie Brad Boyes and sniper Marco Sturm to form a good top line. In the off-season is where the real moves were made, after a front office housecleaning, the B's made a huge splash in free agency by signing Zdeno Chara (1.299pg) and Marc Savard (1.338ovr). Surely the B's fans will enjoy Chara's hard-nosed skilled game in contrast to Gill's soft bumbling style. While talk of a Cup may be a little much, there is no reason the B's should not be competitive and finish as a 4 or 5 seed in the East.
